1987 Ferrari Testarossa GTR by Gemballa

The 1987 Ferrari Testarossa GTR by Gemballa is a one-off masterpiece that epitomizes the excess and flamboyance of 1980s culture. Commissioned by entrepreneur Bruce Selig and created by renowned German tuner Uwe Gemballa, this extraordinary car merges Ferrari's legendary engineering with Gemballa's cutting-edge design and technology. The GTR features an extended wide-body kit, increasing its width by 120mm, and unique modifications such as a custom front and rear bumpers, a roof-mounted rear spoiler, and Canary Yellow 17-inch centerlock BBS Racing alloy wheels.

Inside, the car is a showcase of luxury and innovation, with black water buffalo leather upholstery, yellow-piped Recaro seats, and a groundbreaking 7-inch TV screen displaying a rearview camera – a world-first at the time. The multifunction steering wheel and premium Pioneer stereo system further highlight Gemballa's attention to detail and technological foresight. Despite its visual transformation, the car retains its mechanically standard 4.9-liter flat-12 Ferrari engine, capable of 385 bhp, ensuring reliable serviceability and timeless Ferrari performance. The car is fitted with a striking Gemballa exhausts manufactured by Magnaflow which is arrayed in two banks of three.

This Testarossa GTR embodies the spirit of Miami's high-rolling lifestyle in the '80s. Beautifully preserved, meticulously maintained, and restored, this piece of automotive history offers a rare glimpse into the wild world of 1980s supercar modifications.
